

# AskQuija Bot

---

## How to Use

1. Create an application at [Discord Dev Portal](#)
2. Create a bot
  - Go to the bot tab and click **Add Bot**
  - After adding scroll down to **Privileged Gateway Intents** and turn on **Message Content Intent**
3. Add to server
  - Go to the OAuth2 tab
  - Click URL Generator
  - Add the **bot** and **application.commands** scopes
  - Copy the generated url at the bottom
  - Paste into web browser and add to desired server
4. Install [NodeJS](#)
5. Add Credentials to **.env** file
  - See **.envExample** for format
  - **Token** is from bot tab mentioned above (don't lose or expose this)
  - **Client ID** is from OAuth2 tab
6. Run **npm install**
7. Run **npm start** && **npm deploy** to start the bot
8. Use the **/ask** command in the server
9. Enjoy 😊
